

**TAXABLE VALUATION PER PERSON in
NEW HAMPSHIRE COMMUNITIES 1980 to 1998**
prepared by
NH OFFICE of STATE PLANNING
August 1999

Data presented in this report show the taxable equalized property valuation per resident for the state's 234 communities. These data are summarized for the state's ten counties and include the years 1980, 1990 and 1998. The change in valuation per person between the years 1980 and 1998 is also shown.

Rank The data are displayed so that the relative position of a given community (or county) can be determined by referring to the "rank" column. In the accompanying tables, this column appears to the right of the data to which it is associated. There are 234 incorporated places in New Hampshire. The ranks for all four variables are calculated on a "low" to "high" basis. For instance, Allenstown's 1980 valuation per resident was \$12,253. This was the lowest among all municipalities and is given the rank of "1". Newington's 1980 valuation per resident was \$430,886; this was the highest in the state with a rank of "234".

Equalized Valuation Per Capita These data are expressed in number of dollars per person. The valuation of taxable property is the community's, "tax base", the amount of wealth that can be taxed. The equalized valuation reflects, insofar as possible, the true market value of all taxable property in each community.

The valuation figures are based on local assessment of property value. However local assessments are not comparable among communities. The Department of Revenue Administration conducts an annual survey of property values to equalize differences of the locally assessed values. Based on the results of the survey, an amount is either subtracted or added to the local assessments. This adjustment allows comparison among communities.

Per Person Also for the purposes of comparability, the tax variables are expressed in per person or per resident terms. Communities with large populations will naturally tend to have large total valuations. However such a large total valuation may or may not be in proportion with size of population. The state's most populous city, Manchester, had a total equalized valuation of approximately 3.9 billion dollars in 1998. This was almost three times the total value of Bedford, a much less populous community. Nevertheless, Bedford had more valuation for each resident (\$88,354) than Manchester (\$37,500) in that year.

Population The population figures used to calculate the valuation per person are taken from the U.S. decennial census (1980, 1990) and from OSP's population estimate (1998). Data users interested in analysis of valuation trends are cautioned about over reliance on population estimates.

Data users should note that inter-census year population figures are estimates. In many communities annual population changes are likely to be very small. Perhaps smaller than the estimating process' ability to measure accurately. For this reason, year to year comparisons of valuation per person is discouraged. It is recommended that trend analysis be separated by at least two years.

The minimum two year separation is particularly important when comparing a census year with a non census year. This is because of the radical

difference in the nature of a census and an estimate. Some of the difference in the numbers is apt to be methodological rather than real differences in population.

Group Quarters Populations Census and estimates include "institutional" or group quarters populations. These are populations that reside in college dormitories, prisons, nursing homes and the like. The inclusion of these types of populations affect all town rankings to some degree and about a dozen towns to a considerable degree. The most extreme case is the Town of Durham. Group quarters population accounts for approximately 45% (1990) of Durham's total population. Because of this, Durham has a very low valuation per person. If group quarters population were not included, then Durham's rank would be about in the middle of the array.

Communities which are affected significantly by institutional population include: Keene, Rindge, Hanover, Plymouth, Goffstown, Antrim, Henniker, Hooksett (in some years), New London, Benton and Durham.

Additional Information Persons that wish to obtain additional information about this report should contact the Office of State Planning 2 ½ Beacon Street Concord, NH 03301-4497 Telephone (603) 271-2155 TDD Access: Relay NH 1-800-735-2964
