Honorable Board of Selectman
Town of Pelham
6 Village Green
Pelham, NH 03076

Introduction:

Allied Waste Services of Massachusetts, LLC is pleased to submit this RFP for Solid Waste and Recycling services for the Pelham Transfer Station and Recycling Facility. Allied Waste Services of Massachusetts, LLC has provided the requested services to a host of towns such as Pelham and we enthusiastically look forward to having the opportunity to assist the Town of Pelham in this endeavor. Enclosed is our response to your RFP.

Executive Summary:

Allied Waste is an alliance of hundreds of companies that have been serving their communities with local pride, integrity and innovation for decades. Regardless of our size, we are and always will be a local business. Our managers know our business, they know our communities, and are proud of the service we provide. Our goal is to build long time relationships with our customers and our mission is to meet or exceed your expectations each and every time, as promised, in a safe and efficient manner. Allied Waste and its subsidiaries currently service approximately 14.3 million households through 1500 curbside solid waste collection programs as well as 6.9 million households in curbside recycling programs.

Achieving such a significant presence within the Municipal Community is a result of 35 years of responsible, efficient and consistent performance. Our commitment to service is unprecedented as is our devotion to ensuring that each and every community is the beneficiary of this commitment.

Conclusion:

The Tyngsboro Division employs a team of dedicated Managers, Supervisors, and drivers with over 170 years of experience and as you can see, is most capable of providing Town Pelham with the high quality of customer excellence that is expected. We can tailor any service to meet the needs of your community and look forward to working with your team.

With the aforementioned in mind, please refer to the Table of Contents for the location of documents, which should assist the Town in its evaluation of our proposal.

If I can be of any assistance, please do not hesitate to contact me.

Sincerely,

Stan Walczak
General Manager
Allied Waste Services of Massachusetts, LLC
Tyngsboro Division

ALLIED WASTE

SERVICE PLAN OVERVIEW

This proposal is submitted by the Tyngsboro Division of Allied Waste Services of Massachusetts, LLC, a business unit of Allied Waste Industries, Inc. All proposal responses made herein are limited to the Tyngsboro Division of Allied Waste Services of Massachusetts, LLC and do not pertain to all of the divisions or other business units of Allied Waste Industries, Inc.

On the following pages are our service plans for the Pelham Transfer Station. The plan describes in detail, the services you have requested for solid waste, recycling.

SAFETY & ENVIRONMENTAL COMPLIANCE:

Allied has the best safety record in the industry. We spend hundreds of thousands of dollars a year on our employee safety and incentive programs. Our employees are our number one asset.

COMPACTOR SERVICES:

Allied Waste Services of Massachusetts, LLC is capable of providing state of the art compactor equipment as outlined for the storage and transport of MSW, Plastics Nos. 1-7 and OCC. Our knowledgeable team of professionals is capable of installing, servicing and maintaining all compactor equipment.

OPEN TOP ROLL OFFS:

Allied Waste Services of Massachusetts, LLC can provide both open top and closed top roll off containers for purpose of collecting and transporting various designated recycling materials as well as the ash from the brush burn pile. Additional orders for open tops can be filled in a 24 hour time frame on an as needed basis.

RECYCLE COLLECTIONS SERVICES:

Allied Waste Services of Massachusetts, LLC does own its own material recovery facility (MRF) in Hooksett NH where it processes recyclable materials, which includes but is not limited to cardboard, plastics, glass, and aluminum.

15-Sep-09

Town of Pelham
Pelham Selectmen
6 Village Green
Pelham, NH 03076
Attn: Bruce A. Mason/Transfer Station Bid

Dear Mr. Mason:

We would like to submit the following proposal for the services as outlined in your request for proposals for the Pelham, NH Transfer Station.

1. Provide 100 yd closed container that is compatible with the Town of Pelham's compactor for the purpose of hauling MSW - \$300 monthly rental, \$250/haul.
2. Provide two compactor units with 40 yd closed roll-off containers for the purpose of hauling plastics Nos. 1-7 and OCC - \$150 monthly rental each unit, \$115/haul.
3. Provide 1-20 yd closed top with windows for collecting newspaper - \$50 monthly rental, \$115/haul.
4. Provide 2-30 yd open top roll-offs for collecting tin cans and assorted materials that the Town has labeled Junk - \$50 monthly rental each unit, \$115/haul.
5. Provide 1-20 yd open top on an on-call basis for hauling ash from the Town's brush burn pile - \$50 monthly rental, \$115/haul.

Tipping Fees

MSW - Year one - \$67/ton, Year two - \$69/ton, Year three - \$71/ton,
Year four - \$72/ton and Year five - \$73/ton.

Ash from Brush burn pile

Same price as MSW as long as the Town provides current waste approval and analytics.

Hauling and rental will be subject to a 3% increase per year starting in year two of the contract.

Recycling Revenue and processing fees

Newspaper - OBM yellow sheet, 2nd edition, high side New England less \$35/ton processing

OCC - OBM yellow sheet, 2nd edition, high side New England less \$25/ton processing

Plastic Nos. 1-7 with glass - \$25/ton processing fee

Plastic Nos. 1-7 without glass - rebate based on monthly plastic market rate

Tin Cans - rebates based on metal market rate

Thank you for this opportunity to provide this proposal to the Town of Pelham and we look forward to working with you to provide for your disposal needs. Should you have any questions, please feel free to contact me at 978-375-6207.

Sincerely,

Stanley Walczak
General Manager
Allied Waste Services

Allied Waste - Tyngsboro Business Unit #142 Organizational Chart

GENERAL MANAGER - STANLEY WALCZAK

Your Local Allied Waste Services Waste Services TEAM

With Allied Waste Services you can count on a Team of the industry's most experienced and focused professionals to do the job right! Our teams of experts work hard behind the scenes to help your Account Executive proactively implement solutions to your specific waste needs. Please feel free to contact your Account Executive anytime you have questions or concerns about your service. **Your Allied Waste Services support Team members include:**

Stan Walczak – General Manager

Office: 800-442-9006 ext 555

As the leader of your local Allied Waste Services facility, the General Manager will make sure your account is serviced to your expectations. Stan oversees the entire operation of your service facility and his first job is to insure your complete satisfaction with our services.

Peggy Ford - Customer Service Manager

Office: 800-442-9006 ext 114

Our Customer Service Manager maintains the integrity of our Customer Service Department and makes sure that you are receiving the service that you need when you need it! Peggy is also available in those circumstances where special attention is required.

Don Butler - Operations Manager

Office: 800-442-9006 ext 560

Our Operations Manager oversees all drivers, dispatchers and supervisors. He works with your Customer Service Manager to address concerns regarding the logistics of your service. Don has the direct responsibility for the drivers that service your account.

Jim Reynolds - Roll-Off Supervisor

Office: 800-442-9006 ext 579

The Roll-Off Supervisor is in charge of all of the trucks and where they go every day. Jim deals with making sure that your pick-up occurs promptly as scheduled, keeping your operations unencumbered with as little down time as possible.

FACILITY INFORMATION

ALLIED WASTE SERVICES OF MASSACHUSETTS, LLC
385 DUNSTABLE ROAD
TYNGSBOROUGH, MA 01879

MANAGER: STANLEY J. WALCZAK

TELEPHONE: 1-978-649-1564

THIS 7 DOUBLE BAY MODERN FACILITY IS MORE THAN ADEQUATE TO PROVIDE MAINTENANCE TO OUR 119 VEHICLE FLEET. IT IS SCHEDULED TO OPERATE FROM 5:00 AM UNTIL 1:00 AM. THERE ARE 12 FULL TIME QUALIFIED MECHANICS AND 5 ROAD SERVICE VEHICLES AVAILABLE TO MEET ANY CHALLENGE THAT MAY ARISE

ANY NEW EQUIPMENT REQUIRED TO FULFILL THE CONTRACT WILL BE PURCHASED WITH THE CORPORATE LINE OF CREDIT AS OUTLINED IN THE ANNUAL REPORT.

MATERIAL RECOVERY FACILITY

34 INDUSTRIAL PARK
HOOKSET, NH 03106

Allied Waste Services of Tyngsboro

Emergency Response Plan

Training

Training is the key in making sure that our employees are on the lookout for any non-acceptable municipal solid waste that might be deemed hazardous. All employees are trained on identification and procedures that relate to hazardous waste situations. As part of our new hire orientation, this is also one of the major focus points in the training for the employee to understand the environmental impact and legal issues related to this matter.

Response Procedures

Radioactive Material

When radioactive material is identified at an end site, the following steps are taken to assure that Allied is in compliance with State and Federal laws:

1. Driver contacts Operations Manager or Supervisor
2. End site reports to State regulatory agency
3. Allied Operations contacts State regulatory agency to arrange permit to transport for the material to be inspected
4. Allied Operations contacts a State approved vendor - Applied Consultants to inspect the load and separate radioactive materials
5. Allied Operations contacts the City of Town and works with the proper department to identify the source of the material
6. Material is secured and disposed of properly

Other Hazardous Materials

1. If an employee identifies hazardous material, the employee will not pick up the material and will notify the Operations Manager or Supervisor of his/her discovery and Allied will notify the City or Town to arrange for proper disposal

We believe the key in any situation is that the proper lines of communications, well trained employees and the ability to predetermine that hazardous waste exists before the collection is made.

Management Training Outline

Review Management and Driver Policy

Management Approach to Emergency Spill Response and Reporting

- What kinds of spills do we manage?
- What constitutes a recordable spill?

310 CMR 40.0311(4) states, within two hours after obtaining knowledge of a sudden, continuous or intermittent release to the environment of oil when the quantity of the release is unknown, it is likely that the quantity of the release is equal to or greater than the applicable reportable quantity of ten (10) gallons and it is likely that the release occurred within any period of 24 consecutive hours or less.

310 CMR 40.0321-c states, the following releases shall be deemed to pose an Imminent Hazard to health, safety, public welfare and/or the environment in the event the release is to a roadway that endangers public safety.

- **Operational/Safety/Maintenance response to reported spill**
 - ✓ Getting information
 - ✓ Assembling spill response team
 - ✓ Conducting spill assessment
 - ✓ Determination that spill is recordable
 - ✓ 3rd party response
- **10 questions to ask when a spill is reported to base**
 1. What is the type of spill (diesel, hydraulic oil, motor oil)
 2. What is the source of the spill? (Line break, tank rupture, piston)
 3. Where is the oil? (ground, drain, running, hopper, spray)
 4. What is impacted? (street, driveway, grass, water, storm drain, catch basin, waterway)
 5. What kind of area? (residential, commercial/industrial, parking lot, main street, dirt road)
 6. How much product has been released?
 7. Is the spill contained with absorbent and/or spill kit?
 8. Is there any threat to public safety? (dangerous road condition, oil on sidewalk)
 9. Do we need police or fire assistance to aid in clean up effort?
 10. What is your exact location?
- **After the spill...what happens**
 1. Written report from driver and spill assessment officer
 2. Follow up with 3rd party response team to ensure cleanup is appropriate; ensure site is closed and reporting deadlines are met
 3. Develop lessons learned...why did the spill happen?
 4. Review spill circumstances and close out activities with management team

BLOODBORNE PATHOGENS PROGRAM

Exposure Control Plan

Overview of the Standard

The Standard covers employees who, as result of doing their job, could come in contact with blood or other potentially infectious material through the eyes, nose, mouth, or through non-contact skin.

In our setting this standard covers:

- Designated first response team members
- Hauling and Landfill Operations personnel
- Recycling and Transfer Station personnel

Note: Everyone in the workplace must be aware of the standard so that first-aid and clean-up procedures are handled safely.

Requirements for Allied Waste Industries, Inc.

- Develop an exposure control plan
- Provide the following training to workers who are affected by the standard:
 - a. Bloodborne diseases and how they are spread
 - b. The exposure control plan
 - c. Engineering and work practice controls
 - d. Hepatitis B vaccine, exposure evaluation and follow-up
 - e. How to respond to emergencies involving blood
 - f. Signs and labels used to warn of potential hazards.

KEY DEFINITIONS

Bloodborne Pathogens: Microorganism present in human blood that can cause disease in humans. These include but are not limited to:

- a. Hepatitis B virus, HBV
- b. Human Immunodeficiency virus, HIV (AIDS virus)

Exposure Incident: A specific eye, mouth, nasal membrane, non-intact skin, or parenteral (through the skin) contact with blood or other potentially infectious materials that may result from doing one's job.

Parenteral: A piercing of membranes in the nose or mouth, or of the skin barrier by means of a puncture by a sharp item (blades, metal shavings, needlestick), human bite, cut or abrasion.

Universal Precautions: An infection control approach whereby all human blood and certain body fluids are treated as if they were known to be infections for HIV, HBV, or other bloodborne pathogens.

1. WHO AND WHAT THE STANDARD COVERS

Occupational Exposure to Bloodborne Pathogens 29CFR 1910.1030 covers employees who, as a result of doing their job could come in contact with a sharp object such as a blade or metal shaving, a needlestick, cut or human bite.

This group includes healthcare workers, housekeeping or laundry personnel in healthcare facilities, police officers, emergency medical providers, firefighters, and employees of correctional facilities and funeral homes. In addition, the standard applies to those who work at in controlled hazardous waste remediation sites, Resource Conservation Recovery Act waste treatment and disposal facilities and those who respond to hazardous material emergencies.

Workers covered by the bloodborne pathogens standard in our setting:

- Designated first responders (first-aid team members)
- Driver and Mechanics
- Landfill Operations personnel

Potentially infectious materials include the following:

- Semen and vaginal secretions
- Amniotic fluid (bag of waters)
- Breast milk
- Saliva
- Any body fluid that visibly contains blood
- Any body fluid you can't identify

2. ENGINEERING CONTROLS AND WORK PRACTICES

Work practices stressed thorough hand washing, preventing skin punctures by sharp objects, and minimizing splashing or spraying of blood, is our first step. Engineering controls eliminate hazards at their source. These controls include the use of puncture-proof containers for sharp items or providing barrels for broken glass.

At the core of the engineering and work practice controls is a method of exposure prevention called "universal precautions". This is a method of infection control that treats all human blood and certain fluids as if they are infectious. This method is used because

many people who carry bloodborne infections have no symptom and may be unaware they have a problem.

In any setting where it is possible for a worker to be exposed to bloodborne pathogens, the following engineering and work practice controls must be used:

- a. Always wash hands immediately after removing gloves or other protective equipment and after any hand contact with blood or potentially infectious liquids. If a sink isn't available, antiseptic cleansers must be provided.
- b. Do not bend. Break or re-cap any used blade or sharp item. In addition, never pick up broken glass or metal shavings with your fingers. Use tongs or a broom and dust pan to clean up these items.

Note: If needles are used in the first-aid setting, they should not be re-capped after use.

- c. Dispose of used blades and needles in puncture-resistant containers with leak-proof side and bottom. Containers must be properly labeled, and they are called "Sharps Containers".

Note: Blades used to cut plastic are not contaminated but they must be disposed of in a way that does not pose a danger to other workers. These blades can be disposed of in a container marked "USED BLADES". On the other hand, a used needle or a blade or metal shaving that has cut a finger is contaminated and must be deposited in a biohazard box.

- d. Do not eat or drink, apply cosmetics or lip balm or handle contact lenses in areas where there is a potential for exposure.
- e. Never store food or beverages in refrigerators, shelves, cabinets or countertops or these same areas.
- f. Avoid spraying or splashing of blood or body fluids.

TIPS TO PREVENT SPRAYING AND SPLASHING

The potential for spraying and splashing of blood or body fluids exists at an accident scene and during clean-up procedures. Here are some ways to protect yourself:

- Select the proper protective equipment to shield your self against exposure. These items could include gloves, facemask, eye protection, and a gown depending upon the amount of blood present.
- Since a mop tends to splash fluids around, use an absorbent first, and then collect the material into a dustpan.
- To wash an item that has been exposed to blood or body fluids, fill the sink with water and disinfect out, then place the item into the sink to soak. Never try to rinse the item under a running faucet as it can cause blood or fluids to be sprayed or splashed out. After the item is removed, clean and disinfect the sink.

3. PERSONAL PROTECTIVE EQUIPMENT

Personal protective equipment protects you and your clothing from exposure to blood or body fluids. Gloves are the first line of defense in these situation, but masks, face shield, eye protection, gowns, and for first responders, pocket masks must also be available.

Allied provides the equipment and employees must use it when the possibility of exposure to blood or body fluid exist. This equipment must not allow blood or potentially infectious matter to pass through to your clothes, skin, eyes, or mouth. Personal protective equipment must be readily accessible and available in appropriate sizes.

Gloves are the most commonly used item of personal protection. They are the barrier between your hands and possible exposure to bloodborne pathogens.

- Single use gloves should be replaces as soon as possible after they are contaminated or if they become torn or punctured. These gloves should never be washed for re-use.
- Never use gloves that are cracked, peeled or discolored.
- Prior to putting on gloves, clip back long hair.
- Avoid rubbing the eyes or face after gloves are in place.
- To remove gloves properly:
 - a. Peel off one glove and hold it in the glove hand
 - b. With an uncovered finger, peel off remaining glove from the inside.
 - c. Dispose of the gloves promptly and properly then wash your hands.

Note: Hypoallergenic or powder less gloves will be provide for workers who are allergic to regular gloves.

Gloves may be used in situations where the potential for spraying or splashing of blood or body fluids exit, or at an accident or clean-up scene when large amounts of blood are visible. Since the purpose of the gown is to protect your clothing, always tie or snap it in the back so that the front offers as much protection as possible.

There are many types of masks and eye protective equipment available. Regardless of their style, these devices are all designed to prevent blood of body fluids from entering your nose, mouth, or eyes. To further reduce your risk of exposure, avoid touching a mask or eyepiece with your gloves.

4. HOUSEKEEPING TECHNIQUES – EXPOSURE CONTROL PLAN

The exposure control plan outlines a written cleaning schedule that outlines the method of decontamination to be used. Here is a general guide.

- a. All equipments and work areas must be cleaned and decontaminated as soon as possible after contact with blood or potentially infectious fluids.

- b. Never pick up broken glass or metal scraps with your hands, even if you're wearing gloves. Use pliers, tongs or a boom and dust pan and dispose of the sharp items in the containers provided.
- c. Isolate the area to be cleaned and disinfected by placing a tape barrier around the site and by posting appropriate signs.
- d. Protect yourself by putting on gloves, and as needed, a facemask, eye protection, and gown.
- e. Scatter absorbent on any blood or body fluid on the floor, then collect the debris and deposit it into a plastic gown.
- f. Wash floor any contaminated surfaces with soap and water followed by a 10% of bleach.

Some commonly used disinfectants are:

- Chemical Solutions approves as hospital disinfectants, which are also effective against tuberculosis.
- Products registered by EPA as being effective against HIV and labeled: HIV (AIDS Virus).
- A solution of household bleach diluted to 1 part bleach and 10 parts water.

Note: Tape used to isolate the area should stay in place until disinfected area is completely dry.

- g. Machinery that has been splashed with blood or body fluids must be washed down with soap and water, and then disinfected.

Note: The person doing this clean up must also be properly protected with gloves, masks, and as needed, eye protection and a gown.

- h. All gown, gloves and materials used in cleaning and disinfecting are to be placed into a biohazard bag or regular plastic bag according to the facility's procedures.
- i. For general housekeeping in areas where blood or body fluids may be present (i.e., disposal of sanitary napkins from rest rooms) the custodian should wear gloves. Depending on the amount and type of work to be done, eye protection and mask may be advised.

5. HEPATITIS B VACCINE, EXPOSURE INCIDENT HANDLING AND FOLLOW-UP

The risk of becoming infected by Hepatitis B virus far outweighs the chances of contracting HIV. Therefore, employers must offer Hepatitis B vaccine to all employees who have occupational exposure to blood.

- A. The vaccine must be available at a reasonable time and place within ten days of job assignment.

- B. Allied is not required to offer the vaccine to workers who provide first aid as a secondary job duty. A secondary job duty is one that is done on a call or as-needed basis and is not the individual's primary function.
- C. Employees who do not wish to be vaccinated must sign a Declination Form. However, the employer must provide the vaccination if these workers change their minds at a later date.
- D. When an exposure incident is reported, the employer must arrange for an immediate and confidential medical evaluation. An exposure incident is defined as a specific eye, mouth, nasal membrane, non-intact skin, or pierced skin contact with blood or other potentially infected body fluids, which occurred while doing one's job.
- E. The medical evaluation must:
 - Document how the exposure occurred
 - Identify and test the source individual, if feasible
 - Test the exposed employee's blood, if consent is obtained
 - Provide counseling and evaluate any reported illness.

Note: The medical professional doing this examination must be given all relevant data needed to complete the employee's evaluation.

6. COMMUNICATION OF HAZARDS

An important part of the bloodborne pathogens standard is the use of warning labels and signs to alert employee of hazards involved.

- A. All warning labels must:
 - Bear the biohazard legend
 - Be printed on fluorescent orange or orange-red with lettering of a contrasting color.
- B. Red bags or containers may be used as a substitute for labels.
- C. Labels must be placed on all packaging that contains blood or potentially infectious material.

Note: This includes breast milk that may be pumped and stored in a workplace refrigerator. The receptacle of breast milk must bear the biohazard label. Also, this refrigerator cannot be used to store food or drink.

7. RECORDKEEPING

A. Medical Records

Because of the critical nature of a bloodborne illness, employee's medical records are of extreme importance. These records:

- Must be maintained on all employees with occupational exposure for the period of their employment plus thirty years.
- Should include:
 - a. Name and social security number
 - b. Hepatitis B vaccination status

- c. Results of all exams, testing and follow-up procedures
- d. Copy of healthcare professional's opinion
- e. Copy of information provided to healthcare professional

- Must be available to the employee

Note: These records are confidential and cannot be released without the employee's written consent or if required by law.

B. Training Session Records

- Must be kept for three years
- Must include:
 - a. Summary of program contents
 - b. Dates training occurred
 - c. Trainer's name and qualifications
 - d. Names and job titles of all participants

Allied Waste Tyngsboro Division

First Responder's/Designated Employee Training
Certification

Employee Name: _____

Date: _____

Division: _____

Department: _____

In accordance with Allied Waste (BFI) policies & OSHA Standards, I certify that I received Bloodborne Pathogens First Responder's/Designated Employee Training. The following topics are listed below:

1. BBP Standard OSHA 1910.1030
2. Exposure Control Program
3. Posting Program Statement
4. Purpose of Program
5. Communication of Hazards to Employees
6. Work Practice Controls/Procedures Upon Discovering blood/ infectious materials
7. Exposure Incident Program
8. Vaccination/ Immunization Program Designated Employees
9. Access to Employee Medical Records
10. Spill Clean-Up Principles Applicable to Designated Employees
11. Personal Protective Equipment
12. Decontamination Procedures
13. Proper Documentation

I certify that I have been trained on Bloodborne Pathogens, First Responders Training Allied Waste Policy and OSHA Standards.

CUSTOMER SERVICE – HOURS OF OPERATIONS

Our Customer Service Call Center is open from 8:00am to 5:00pm Monday through Friday at 800-442-9006. If during off hours, you require emergency assistance, please call our answering service at 978-649-9092. An operator will take your information and page the appropriate Allied personnel to answer your call.

In order to expedite your service requests, please use the following guidelines when calling our office.

PLEASE CALL THE CUSTOMER SERVICE CENTER FOR THE FOLLOWING:

- On Call Service
- Regular or Additional service requests
- General service questions
- Container repairs (i.e. broken lids, doors, odor)
- Temporary Roll Off Containers
- Safety Concerns

PLEASE CALL THE SALES DEPARTMENT FOR THE FOLLOWING:

- Increased service
- Decreased service
- New Service locations

PLEASE CALL THE ACCOUNTING DEPARTMENT FOR:

- Commercial billing questions
- Residential billing questions
- Credit or collection related questions
